

# DYMIUM™

## Champion Productivity and Prove Compliance with Dymium Ghost AI™

**Get meaningful  
responses & keep data  
safe with session-based  
encryption & reassembly**

---

**Identify specific sensitive  
data for obfuscation**

---

**Eliminate costly BYO LLMs**

---

**Audit prompts,  
proving compliance**

Generative AI systems using Large Language Models (LLMs) promise a future of dramatically improved productivity across many industries, such as a 45% boost in output for departments including marketing, customer service, and software development. Generative AI can help brainstorm ideas, generate polished communications, recommend code, and even review code quality.

Dymium Ghost AI empowers IT and information security teams to become champions of safe and productive Generative AI adoption, instead of access gatekeepers.

# DYMIUM™

## Secure Your Interface While Accessing LLMs at a Fraction of the Cost

Dymium Ghost AI™ is an enterprise AI portal that sits between the user and both public and private LLMs, whether they are located externally or in the enterprise, protecting data privacy, security, and regulatory compliance.

### Code-blocker

Ghost AI prevents proprietary company code from being leaked to external LLMs, protecting intellectual property (IP).

### Dynamic Private Data Detection

With Ghost AI you can automatically detect and block PII and company-specific private data from leaving company control.

### Safely Boost Productivity

Ghost AI lets employees safely boost productivity without risking sensitive company data.

**Enable Users' Productivity**

**Secure Your PII**

**Safely Use 3rd Party LLMs**
